1 What an office account looks like

An office account records the people who work for you by fingerprint. It's the general-purpose type — for a company, clinic, NGO, church, factory, or any organisation that needs a reliable record of who was in, and when.

Figure 1 The Overview page of a demo office. Screenshots use demo data in dark mode.

Your menu has:

- **Overview** — present and absent today, the attendance rate, and the latest scans
- **Attendance** — every record, with filters, totals, and export
- **Staff** and / or **Members** — your people

- **Devices** and **Enrollment** — the scanners and the fingerprints on them
- **Periods & Holidays** — reporting periods and non-working days
- **Accounts** and **Settings**

There are no academic terms and no year-end promotion — those are school-only.

1.1 Two ways to record a day

Set under **Settings** → **Scan mode**. It's the most important choice you'll make.

Mode	How it works	Choose it when
Present / Absent	One scan marks the person present for the day.	You only need to know who came in.
Time In / Time Out	The first scan is arrival, the second is departure. Both appear on one row.	You need hours, lateness, or early departures.

You can set a different mode for each roster — members and staff.

TIP

Start with **Present / Absent** unless you have a concrete reason to track hours. It's quicker at the door, and you can switch later.

2

Setting up, in the right order

- 1 **Settings** — name, logo, timezone, scan mode, and **Days tracked** (leave Saturday and Sunday unselected if you're a Monday-to-Friday operation).
- 2 **Periods & Holidays** — create your current reporting period, press **Set active**, and add public holidays.
- 3 **Devices** — give each scanner its department and location, e.g. *Operations* and *Warehouse*.
- 4 **Staff** — add your people, or import them from a spreadsheet.
- 5 **Enrollment** — enrol each person's fingerprints, then activate them.
- 6 **Accounts** — create logins for HR, department heads, and supervisors.

IMPORTANT

Choose your scan mode **before** you enrol anyone. Switching mid-period leaves two different shapes of record in the same report.

3

Words you can change

The defaults are Member, Group, Unit, and Period. Rename them under **Settings** → **Custom labels**:

Default	An office usually says
Member / Members	Employee / Employees
Group	Department or Division
Unit	Team, Branch, or Site
Period	Quarter, Month, or Year

The new words appear everywhere, including CSV headings. Nothing about the data changes.

3.1 One roster or two

Two rosters are available, each switched on under **Settings**:

- Most offices use **one** roster for everybody — turn on **Track staff** only. The Members page then disappears.
- Use both for two genuinely different groups — say, a clinic's employees on one roster and volunteers on the other, each with its own scan mode.

4 Periods and holidays

Figure 2 Periods & Holidays in a demo office, with the period renamed Quarter.

4.1 Periods

A period is simply a reporting bucket — a quarter, a month, or a year, whatever matches how you report. Press **Add** on the first tab, enter a name, year, and dates, save, then press **Set active** on its row. Keep exactly one active; each scan is filed under it.

4.2 Holidays

On the **Holidays** tab, add every non-working day: public holidays, company shutdowns, stocktaking days. Nobody is marked absent on them. Tick **Repeats every year** for fixed dates; leave it unticked for dates that move.

Days tracked in Settings handles weekends for you — leave the days you're closed unselected instead of adding them as holidays.

5 Your people

NAME	ID	BRANCH	FINGERPRINTS	STATUS	ACTIONS
Amelia Jones	NWL-002	Reception London HQ		Active	Edit Deactivate
Ava Wilson	NWL-006	Warehouse Loading Bay		Active	Edit Deactivate
Charlie Walker	NWL-011	Reception London HQ		Active	Edit Deactivate
Emily Baker	NWL-024	Warehouse Loading Bay		Inactive	Edit Activate
Florence Clarke	NWL-022	Mezzanine Office		Active	Edit Deactivate
Freya Hughes	NWL-016	Mezzanine Office		Active	Edit Deactivate
George Williams	NWL-005	Reception London HQ		Active	Edit Deactivate
Grace Wright	NWL-012	Warehouse Loading Bay		Inactive	Edit Activate
Harry Taylor	NWL-003	Warehouse Loading Bay		Active	Edit Deactivate
Henry Harris	NWL-021	Warehouse Loading Bay		Active	Edit Deactivate

Figure 3 A demo office's Staff page.

5.1 Adding one person

Go to **Staff** and press **Add**. Enter the full name and ID, and choose their unit — listed as department and location. The dashboard then offers to enrol their fingerprints straight away.

5.2 Importing a spreadsheet

- 1 Press **Import CSV** and download the template.
- 2 Fill in one row per person: `sid` (staff number), `fullname`, and the unit as the dashboard shows it.
- 3 Upload and review the preview, which flags any row it can't use before anything is saved.
- 4 Confirm.

Imported people start Inactive because they have no fingerprints yet. Enrol each one, then press **Activate**.

5.3 Leavers

Press **Deactivate** on their row on their last day. Their history is kept and they stop being marked absent. People are never deleted.

NOTE

If you forget to deactivate a leaver, they collect an absence every working day, which distorts your reports until someone notices.

6 Lateness and early departures

Under **Settings**, two optional switches turn the attendance record into a punctuality record:

Setting	What it does
Flag late arrivals	Set an Expected start time and a Grace period in minutes. Anyone whose first scan is after start plus grace gets a Late badge.
Flag early departures	Set an Expected end time and a Grace period . A time-out scan before end minus grace gets an Early badge. Only works in Time In / Time Out mode.

For example, with a start of 08:00 and 10 minutes' grace, a scan at 08:09 is on time and 08:11 is late.

7 Accounts for supervisors

Give department heads and shift supervisors a **Staff** account assigned to their unit. They can see and export their own team's attendance and nothing else, and can't change anything.

For a supervisor who should also manage their team's records — adding people, enrolling fingerprints on their scanner — create an **Admin** account assigned to that unit instead. Leave the unit blank for an HR admin who covers everyone.

8 Getting data out

The screenshot shows the 'Attendance' page in the Northwind Logistics system. The interface includes a sidebar with navigation links and a main content area with filters and a table of attendance records. The filters allow users to select date ranges, quarters, member types, statuses, staff members, and branches. The table displays individual attendance records for a specific date, showing staff names, IDs, branches, and their time in and out, along with their status (Present or Late).

Figure 4 The Attendance page: filters across the top, then the Records, Summary, and By member tabs.

Go to **Attendance**, set the filters — dates, period, member type, status, people, units — and press **Export CSV**. The file opens in Excel or Google Sheets.

This is how attendance feeds payroll: filter to the pay period and the department, export, and hand the file over. In Time In / Time Out mode both times are on the same row, so hours are a simple subtraction in the

spreadsheet.

Summary gives each unit's present and absent totals and attendance percentage per period; **By member** gives each person's totals and last scan.

9 Everyday problems

Problem	What to do
Everyone is absent on a working day	A holiday was entered by mistake, or the scanner was off all day. Check both.
Everyone is absent on a weekend	Saturday or Sunday is still selected under Days tracked . Unselect it.
Someone was at work but shows absent	They didn't scan, or the scan failed — NO MATCH on the screen means it didn't count.
A time out but no time in	Their first scan of the day didn't register.
The scanner says NOT LOGGED	Accepted but not counted: a holiday, an untracked day, or already recorded.
A leaver still shows absences	They were never deactivated.
A supervisor sees nothing	Their account has no unit, or the wrong one.
An import rejects rows	A field is missing, or a unit doesn't match your scanners.

10 The scanner, at a glance

Arrival recorded. **TIME OUT** at the end of the day.

Saved offline; uploads when the internet returns.

Not counted — holiday, untracked day, or duplicate.

Scanned twice in a minute. The second scan is ignored.

Not recognised. Try again, finger flat.

Not set up yet — see your super admin.

Light	Meaning
 Solid blue	Ready and online
 Solid purple	Ready, but no WiFi

Light		Meaning
	Green flash	Scan accepted
	Red flash	Not recognised
	Solid yellow	Waiting for a finger during enrollment
	Breathing yellow	Waiting to be set up
	Breathing red	Installing an update — do not unplug

**TIP**

COOLDOWN protects Time In / Time Out mode: a nervous double-scan at the door can't accidentally clock someone out a second after they clocked in.
