1

What the system does for a shop

A shop account does two separate jobs. They share one login and one dashboard, but neither depends on the other — you can use either half on its own.

Half	What it covers	How records are made
Staff attendance	Your own employees — stylists, barbers, sales assistants, mechanics	A fingerprint scan at the scanner
Retail	Your customers, sales, stock, and loyalty rewards	Typed into the dashboard by a cashier or manager

**NOTE**

Customers never touch the fingerprint scanner — only your employees are enrolled. A customer's visit is recorded when a sale is made for them, or when someone presses **Log visit** on their row.

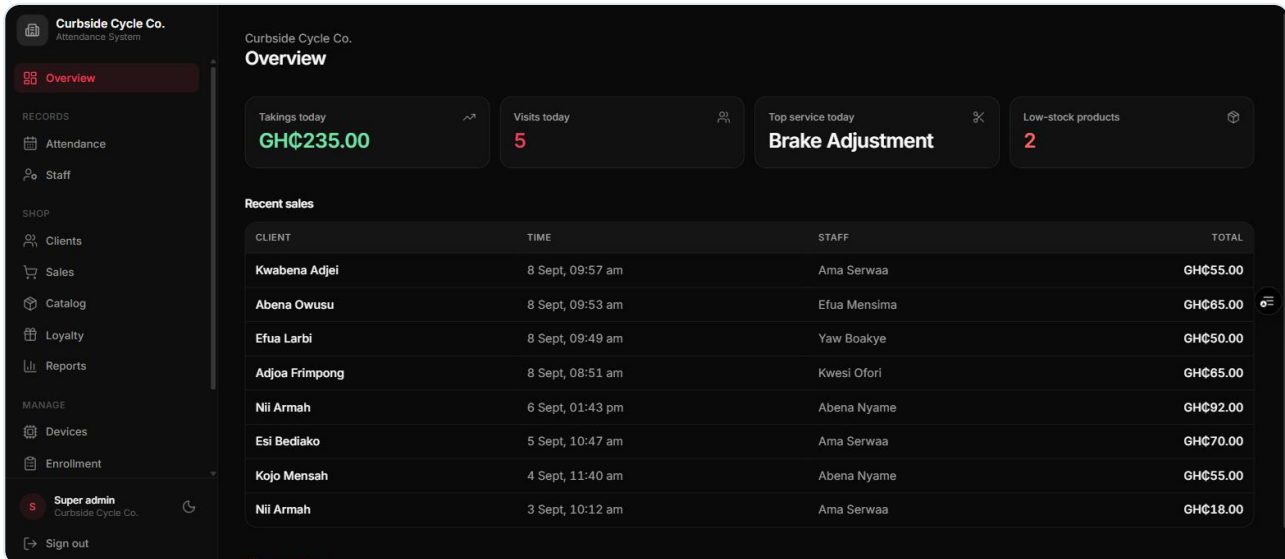

Figure 1 A demo shop's Overview: takings, visits, the top service today, stock warnings, and recent sales. Screenshots use demo data in dark mode.

1.1 What you'll find in the menu

- **Overview** — takings and visits today, the top service, low-stock warnings, and the latest sales
- **Attendance** and **Staff** — your employees' attendance and roster
- **Clients** — your customer list
- **Sales** — record and review sales
- **Catalog** — the products and services you sell (*shown when you sell either*)
- **Loyalty** — reward rules and the history of rewards given (*shown when loyalty is on*)
- **Reports** — takings, best clients, revenue per staff member, best sellers, visits, stock, and rewards
- **Devices, Enrollment, Closed Days, Accounts, Settings** — set-up and administration

Each role sees only what it's allowed to use — section 10 has the full list.

2 Setting up, in the right order

- 1 **Settings** — currency, timezone, shop name and logo, and which modules you use: products, services, loyalty (section 3).
- 2 **Closed Days** — your public holidays and any dates you'll be shut.
- 3 **Catalog** — the services and products you sell, with prices.
- 4 **Staff** — your employees.
- 5 **Enrollment** — each employee's fingerprints, at the scanner.
- 6 **Accounts** — logins for your manager and cashiers.
- 7 **Clients** — add customers as they come in; there's no need to load them in advance.
- 8 **Loyalty** — once the catalog is in, your reward rules.

TIP

Do steps 1–3 before you record a single sale. Each sale keeps the prices and currency of the moment it was recorded, so getting them right first saves you correcting history later.

3 Settings that matter for a shop

Found under **Settings**. Only a super admin can change them.

Setting	What it does
Currency	The currency every amount is shown in — GHS, NGN, and others. Display only: it doesn't convert existing figures, so choose it once and leave it.
Sell products	Off hides the Products tab and product lines on sales. Turn it off if you only sell services.
Sell services	Off hides the Services tab and service lines. Turn it off if you only sell products.
Enable loyalty rewards	Off hides the Loyalty page and reward suggestions. History is kept and returns if you switch it back on.
Timezone	When "today" starts and ends for visits, takings, and staff absences.
Days tracked	The weekdays staff attendance counts. Most shops trade at weekends, so leave Saturday (and Sunday) selected. For one-off dates you're shut, use Closed Days .
Track staff	Must be on for employee attendance.

NOTE

Turning off **Sell products** or **Sell services** only hides them from new sales. Past sales keep their items and prices and still appear correctly in Reports.

4 Clients

Clients are your customers — a separate list from **Staff**. A client has no fingerprint.

NAME	PHONE	AREA	VISITS	LAST VISIT	ACTIONS
Abena Owusu	0248641969	Achimota	4	8 Sept 2026	Log visit Loyalty Edit Archive

Figure 2 The Clients page, with visits, last visit, loyalty, and the row actions.

4.1 Adding a client

- 1 Go to **Clients** and press **Add client**.
- 2 Enter the **Name** and **Phone number**, and optionally their area.
- 3 Save.

The phone number is required and unique — it's what ties a customer to their visits and loyalty progress. Type it as `0xxxxxxx` or `+233xxxxxxxx`; the dashboard stores both the same way, so the same number can't be entered twice.

4.2 Working with a client

Action	What it does
Log visit	Records that they came in today and opens a new sale for them. If today's visit is already logged, it says so.
Loyalty progress (gift icon)	How close they are to each reward, and anything they've already earned.
Visit history	Every day they've been in.
Edit	Change the name, phone, or area.
Archive	Hides them from the active list, keeping all their history. Admins only.

A client counts **one visit per day**, however many sales they make that day — which keeps visit-based rewards fair. Use the status filter to see archived clients.

5 Catalog — products and services

Catalog holds everything you can put on a sale, in two tabs.

	Products	Services
Examples	Shampoo, clippers, inner tubes	Haircut, retwist, puncture repair
Has a price	Yes	Yes
Has stock	Yes — counts down with each sale	No

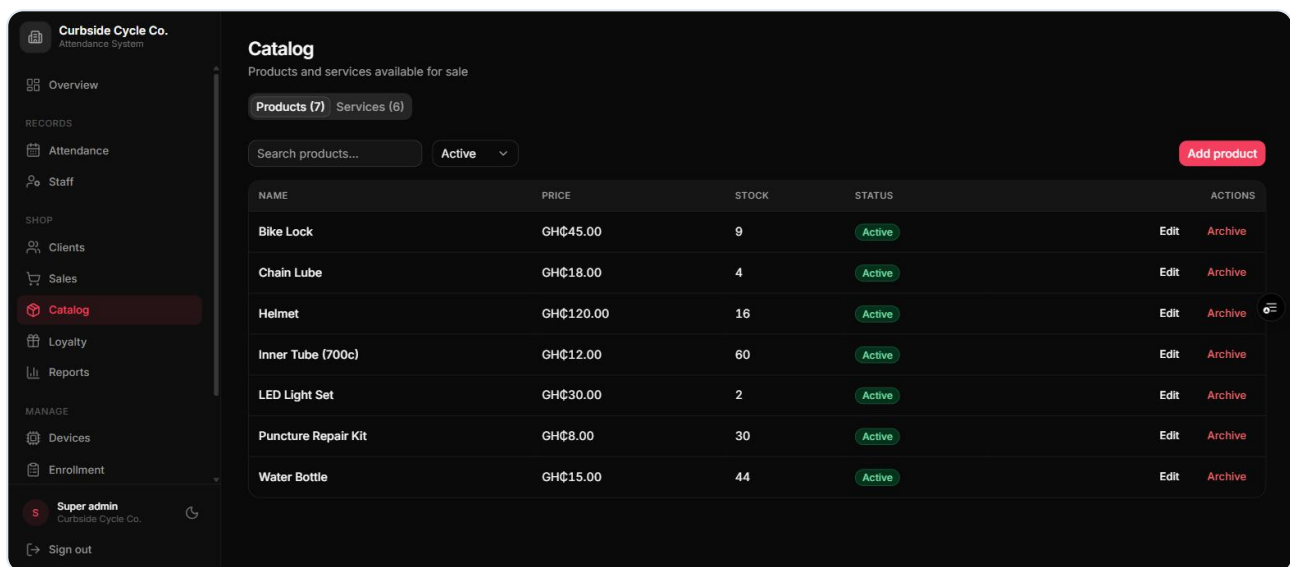

Figure 3 The Catalog's Products tab.

5.1 Adding and changing items

Press **Add product** or **Add service**, enter the name and price (and, for a product, the stock you hold now), and save. Two active items on the same tab can't share a name; archiving an item frees its name.

To change a price, edit the item. **The new price applies to future sales only** — every past sale keeps the price it was recorded at, so your takings never shift under you.

Press **Archive** to take an item off sale. It stays attached to every past sale that used it. Items are never deleted.

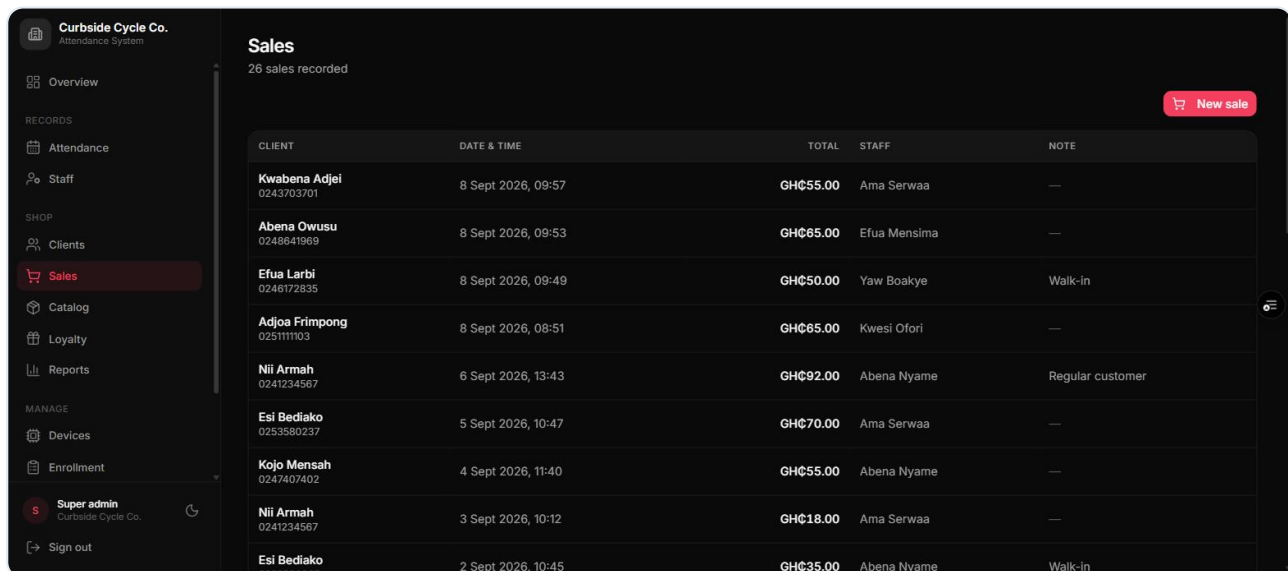

5.2 Stock

Product stock counts down automatically with each sale. It may go below zero — the dashboard won't block a sale because the count says none are left, since the count may simply be out of date. Correct it by editing the product and entering the real figure. **Reports** → **Low stock** lists every product with 5 or fewer left.

Cashiers can see the catalog but not change it.

6 Recording a sale

This is the main daily task. Go to **Sales** and press **New sale** (or press **Log visit** on a client's row).

Figure 4 The Sales page, newest first.

- 1 **Client** — required. Start typing to find them; add them on the Clients page first if they're new.
- 2 **Rewards** — if the client has earned anything, it appears here by itself (section 7.3).
- 3 **Staff** — optional: who served them. Fill it in if you want **Reports** → **By staff** to be meaningful.
- 4 **Items** — one line per product or service, with the quantity.
- 5 **Price** — to give a discount by hand, change the price on that line.
- 6 **Note** — optional, e.g. *Client paid in cash*.
- 7 Press **Record sale**.

Recording a sale does three things at once: it saves the sale, counts today as a visit for that client, and reduces stock for any products sold.

NOTE

Each line keeps the item's name and price **as they were at that moment**. Renaming or repricing a catalog item later never changes a recorded sale.

7

Loyalty rewards

Loyalty is a punch-card system. You set a target, the dashboard counts towards it from real sales and visits, and a reward appears at the till the moment a client qualifies — nobody has to remember or check.

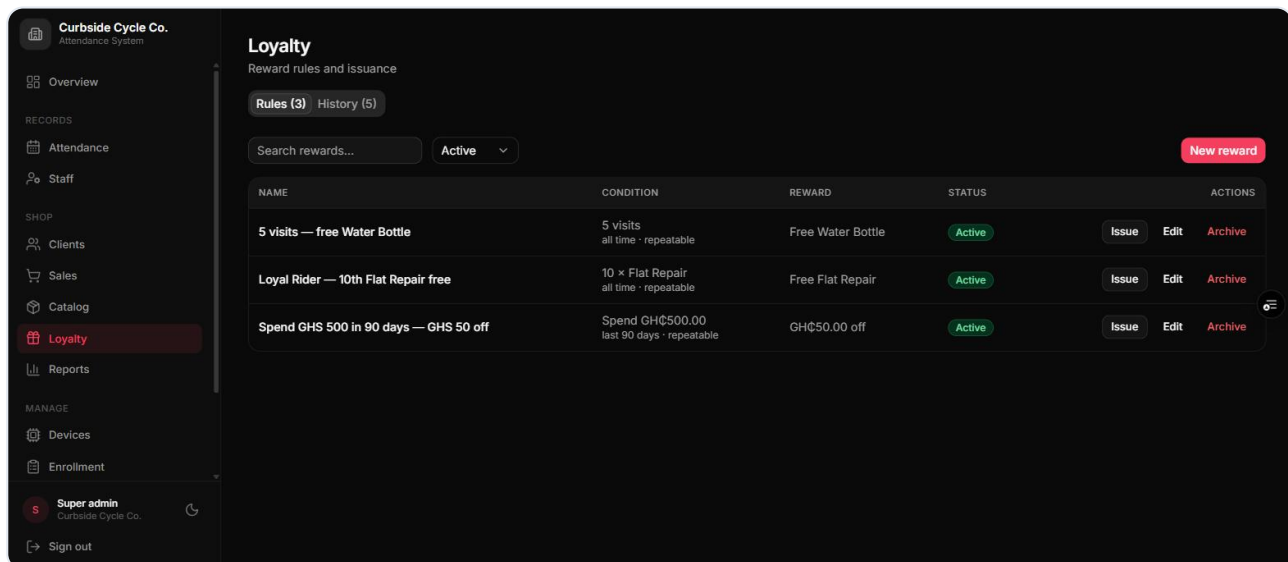

Figure 5 Loyalty → Rules: each rule's condition and reward.

7.1 Building a rule

Press **New reward** and fill in three parts.

Name — write it the way you'd say it, e.g. *Free wash every 10 retwists*.

Condition — when is it earned?

Count	Meaning
Number of services	Service lines sold — optionally one particular service.
Number of products	Product lines sold — optionally one particular product.
Number of visits	Days the client came in.
Total amount spent	Money spent, in your currency.

Then set the target number and the **Counting window**:

- **Since last reward issued (punch-card)** — the usual choice. The count starts again each time they earn it.
- **All time** — counts their whole history.
- **Rolling window (days)** — counts only the last so many days.

Leave **Repeatable (resets and can be earned again)** ticked so regulars can earn it again and again.

Reward — what do they get? A **Free service**, a **Free product**, a **Discount** of a fixed amount, or **Custom** — any reward described in words.

7.2 Where a reward shows up

- **In the Sales screen, the moment you pick the client** — this is where the free item or discount is actually used.
- **On the Clients page — Loyalty progress** shows how close a client is to every rule, and lets you issue anything already earned even if they aren't buying today.

7.3 Applying a reward at the till

Pick the client in **New sale**. If they've earned something, the **Rewards** panel lists it with an **Apply** button.

Reward	What Apply does
Free service or Free product	Makes the matching line free, or adds a free line if it isn't in the sale yet. That line locks, so its price can't be changed by accident.
Discount	Takes the amount off the total. You'll see the subtotal and the reward shown separately above the total.
Custom	Puts the reward's description in the note. Give it to the client yourself.

Nothing is final until you press **Record sale** — press **Undo** on the reward if you picked the wrong one. Once recorded, the reward is used and won't appear again until they earn it again. A reward earned on an earlier visit and never used shows as *already earned* next time, so nothing is lost.

7.4 Who can apply and issue rewards

Cashiers can apply rewards at the till and issue them from a client's loyalty progress, just like admins. The dashboard checks every time that the client has genuinely earned the reward, whoever presses the button — so there's no need to route it through a manager. Building and editing rules is for admins.

TIP

Check **Loyalty progress** while the client is still at the counter. It's the moment to tell them they're two visits away from a free treatment.

8

Reports

Reports is for admins and super admins. Each tab answers one question:

Tab	Answers
Takings	What did we make, day by day and week by week?
By client	Who spends the most with us?
By staff	How much did each staff member bring in?
Items	What sells best?
Visits	How often do clients come back?
Low stock	What do I need to reorder? (5 or fewer left)
Rewards	Which rewards have been given and redeemed, and how many are outstanding?

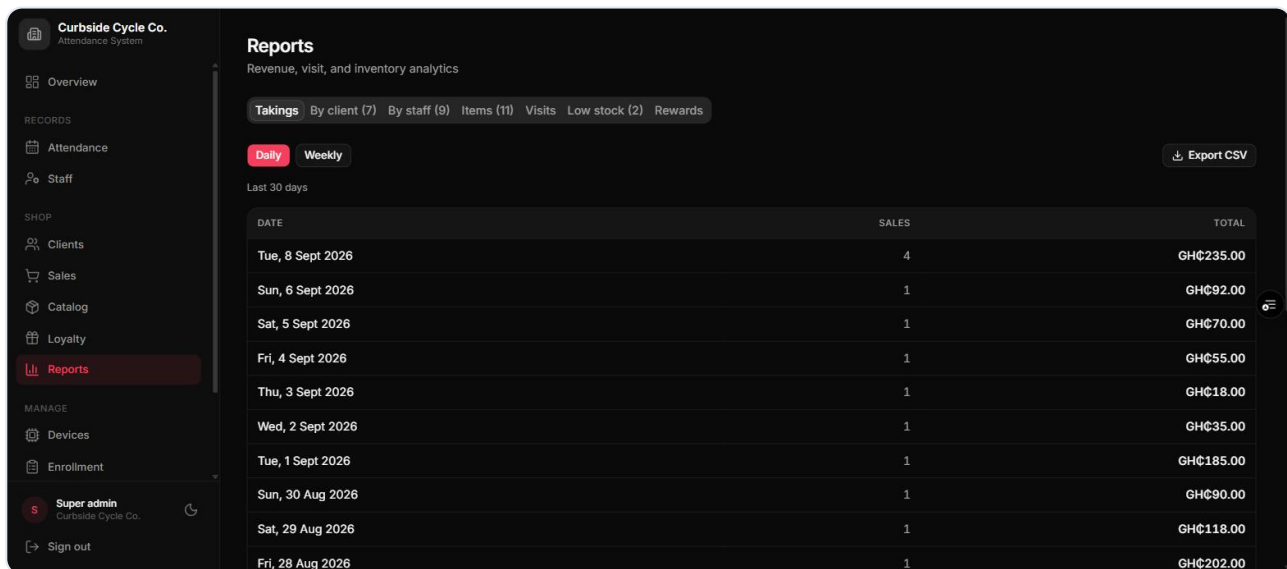

Figure 6 Reports → Takings.

Takings, By client, and By staff can be exported to CSV. **By staff** only counts sales where someone filled in the staff field — make that a habit at the till.

9 Employee attendance

Your employees are on the **Staff** page and scan the fingerprint scanner as in any other institution:

- 1 Add the employee under **Staff**.
- 2 Enrol their fingerprints — straight after adding them, or from **Enrollment**.
- 3 Press **Activate** on their row.
- 4 From then on they scan when they arrive (and when they leave, in Time In / Time Out mode).

Closed Days records the dates the shop is shut, so staff aren't marked absent. Add public holidays there and tick **Repeats every year** for fixed dates. For a day you close every week, unselect it under **Days tracked** in Settings instead.

9.1 Staff who are also cashiers

If someone clocks in with a fingerprint *and* signs in to record sales, link their cashier login to their staff record when the account is created (the **Linked staff** field). That keeps one person from appearing as two unrelated entries.

10 Who can do what

	Super admin	Admin	Cashier
Record a sale, apply a reward	Yes	Yes	Yes
Add and edit clients, log visits	Yes	Yes	Yes
Archive a client	Yes	Yes	No
See the catalog	Yes	Yes	Yes
Add, edit, or archive catalog items	Yes	Yes	No
Issue a reward a client has earned	Yes	Yes	Yes
Build or edit loyalty rules	Yes	Yes	No
Reports	Yes	Yes	No
Staff roster, attendance, closed days	Yes	Yes	No
Scanners and fingerprint enrollment	Yes	No	No
Accounts	Yes	View only	No
Settings	Yes	No	No

Cashier is the till role: clients, sales, and the catalog, and nothing else. Give it to counter staff — it keeps takings, staff records, and settings out of reach without getting in the way of serving customers.

Solid blue

Ready and online

Light	Meaning
 Solid purple	Ready, but no WiFi
 Green flash	Scan accepted
 Red flash	Not recognised
 Breathing yellow	Waiting to be set up
 Breathing red	Installing an update — do not unplug

12

Everyday problems

Problem	What to do
"Invalid phone number"	Type it as <code>0XXXXXXXX</code> or <code>+233XXXXXXXX</code> .
A phone number is rejected as taken	It belongs to another client — possibly an archived one. Search for it.
A product or service name is rejected	An active item already uses it. Rename it, or find and reuse the existing one.
A sale went in wrong	Record a correcting sale and explain it in the note. Ask your super admin if a record must be removed.
The stock count is wrong	Edit the product and enter the real figure.
A staff member is absent on a day you were shut	Add that date under Closed Days .
By staff looks empty	The staff field was left blank on those sales.
The scanner shows a "queued" count	It has lost WiFi. Scans are safe and upload by themselves; check the router.
