

INSTITUTION TYPE GUIDE

Shop & Salon Manual

Running a salon, barbershop, or retail shop on the attendance system

Shop owners, managers, and cashiers
Version 2.0 | August 2026

Contents

1. What the system does for a shop
2. Setting up, in the right order
3. Settings that matter for a shop
4. Clients
5. Catalog — products and services
6. Recording a sale
7. Loyalty rewards
8. Reports
9. Employee attendance
10. Who can do what
11. Device quick reference
12. Everyday problems

1. What the system does for a shop

A shop-type account does two separate jobs. They share one login and one dashboard, but they do not depend on each other — you can use either half on its own.

Half	What it covers	How records are created
Staff attendance	Your own employees — stylists, barbers, sales assistants	Fingerprint scan at the device
Retail	Your customers, sales, stock, and loyalty	Typed into the dashboard by a cashier or manager

NOTE

Customers never touch the fingerprint scanner. Only your employees are enrolled on the device. A customer's visit is recorded when a cashier records a sale for them, or by pressing **Log visit** on the client's row.

1.1 What you get in the sidebar

A shop account shows these sections. Sections marked *optional* only appear when the matching switch is on in **Settings**.

- **Attendance** — your employees' daily attendance
- **Staff** — your employee roster
- **Clients** — your customer list
- **Sales** — record and review sales
- **Catalog** — products and services you sell (*optional*)
- **Loyalty** — reward rules and issuance history (*optional*)
- **Reports** — takings, top clients, revenue by stylist, stock warnings
- **Closed Days** — days the shop is shut, so staff are not marked absent
- **Devices, Enrollment, Accounts, Settings** — setup and administration

Shops do not have **Promotion** or academic terms — those are school-only.

2. Setting up, in the right order

Work through these once, in this order. Later steps depend on earlier ones.

1. **Settings** — set your currency, timezone, and which modules you use (products, services, loyalty). Set your shop name and logo.
2. **Closed Days** — add your weekly closing day and any known holidays.
3. **Catalog** — add the services and products you sell, with prices.
4. **Staff** — add your employees.
5. **Enrollment** — enrol each employee's fingerprint at the device.
6. **Accounts** — create logins for your manager and cashiers.
7. **Clients** — add customers as they come in. There is no need to pre-load them.
8. **Loyalty** — once you have a catalog, create your reward rules.

TIP

Do steps 1–3 before you record a single sale. Prices and currency are captured onto each sale at the moment it is recorded, so getting them right first saves you correcting history later.

3. Settings that matter for a shop

Found under **Settings**. Only a super admin can change these.

Setting	What it does
Currency	The denomination all money is shown in (GHS, NGN, USD, ...). Display only — it does not convert existing figures, so choose it once at setup and leave it.
Sell products	Off hides the Products tab and product line items. Turn off if you are service-only.
Sell services	Off hides the Services tab and service line items. Turn off if you are a pure retail kiosk.
Enable loyalty rewards	Off hides the whole Loyalty section. Existing history is kept and resumes if you turn it back on.
Timezone	Decides when "today" starts and ends for visits, takings, and absence marking.
Days tracked	Leave Saturday (and Sunday) ticked for most shops — salons and shops usually trade at the weekend. For a specific date you are shut, use Closed Days instead.
Track staff	Must be on for employee attendance.

IMPORTANT

Turning off **Sell products** or **Sell services** only hides them from new sales. It never rewrites past sales — old records keep their item names and prices and still appear correctly in Reports.

4. Clients

Clients are your customers. They are a separate list from **Staff** — a client is not an employee and has no fingerprint.

4.1 Adding a client

1. Go to **Clients** and press **Add client**.
2. Enter the name and phone number. Optionally add their area of residence.
3. Press **Save**.

Phone number is required and must be unique. It is the identity key that ties a customer to their visit history and loyalty progress. Two clients cannot share a number. Enter it in full including the country code — the system stores it in a standard form for you.

4.2 Working with a client

Each row on the **Clients** page has these actions:

Action	What it does
Log visit	Records that the client came in today, without recording a sale.
Visit history	Shows every day this client has been in.
Loyalty progress	Shows how close they are to each active reward.
Edit	Change name, phone, or area.
Archive	Hides them from the active list, keeping all their history.

4.3 Archiving, not deleting

Archive a client who has stopped coming. Their sales and visits stay intact and continue to count in Reports. Use the status filter on the Clients page to see archived entries again.

TIP

A client only ever counts **one visit per day**, no matter how many sales they make that day. That keeps visit-based loyalty rules honest.

5. Catalog — products and services

Catalog holds everything you can put on a sale. It has two tabs.

	Products	Services
Examples	Hair food, clippers, shampoo	Retwist, wash, haircut
Has a price	Yes	Yes
Has stock	Yes — counts down on each sale	No

5.1 Adding an item

1. Go to **Catalog** and pick the **Products** or **Services** tab.
2. Press **Add product** or **Add service**.
3. Enter the name and price. For a product, enter the stock you currently hold.

4. Press **Save**.

Two active items cannot share the same name within a tab. If you archive an item, its name becomes free to use again.

5.2 Changing a price

Edit the item and save. **The new price applies only to future sales.** Every past sale keeps the price it was recorded at, so your historical takings never shift under you.

5.3 Archiving an item

Press **Archive** on the row. The item disappears from new sales but stays attached to every past sale that used it, so old receipts and reports stay complete. Items are never permanently deleted.

5.4 Stock

Product stock counts down automatically each time the product is sold. Stock is allowed to go negative — the system will not block a sale because the count says zero, since the count may simply be out of date. Correct it by editing the product and typing the true figure.

Reports → **Low stock** lists every active product at 5 units or fewer.

6. Recording a sale

This is the main daily task. Go to **Sales** and press the button to record a new sale.

1. **Client** — required. Start typing to find them, or add the client first if they are new.
2. **Rewards** — if this client has earned anything, it appears here automatically. See section 7.3.
3. **Stylist / staff** — optional. Set this if you want **Reports** → **By stylist** to attribute the work.
4. **Items** — add a line for each product or service. Set the quantity.
5. **Discount** — to discount a line by hand (not through a reward), edit its price directly on that line.
6. **Note** — optional, e.g. *"Client paid in cash"*.
7. Press save.

Recording a sale does three things at once: it stores the sale, it counts today as a visit for that client, and it reduces stock for any products sold.

NOTE

Each line stores the item's name and price **as they were at that moment**. Renaming or repricing a catalog item later never changes a sale that is already recorded.

7. Loyalty rewards

Loyalty lets you define reward rules. It is a punch-card system: you set a target, the system counts towards it from real sales and visits, and tells you when a client qualifies. Once a client qualifies, the reward is applied where the sale happens — the **Sales** screen — not filled in from memory.

7.1 Building a rule

Press to add a rule and fill in the three parts.

Give the rule a name — write it the way you would say it aloud, e.g. *"Free wash every 10 retwists"*.

Condition — what are you counting?

Count	Meaning
Number of services	Service lines sold. Optionally narrowed to one specific service.
Number of products	Product lines sold. Optionally narrowed to one specific product.
Number of visits	Days the client came in.
Total amount spent	Money spent, in your currency.

Then set the target number, and the **counting window**:

- **Since last reward issued (punch-card)** — the usual choice. The count resets each time they earn the reward.
- **All time** — counts their entire history.
- **Rolling window (days)** — counts only the last N days.

Repeatable — leave ticked so the reward can be earned again and again.

Reward — what do they get? Choose a free service, a free product, a discount amount, or *Custom* with a free-text description.

7.2 Where a reward shows up

A reward becomes available to a client the moment their history clears the target — there is nothing to run, and nobody has to check for it. It shows up in two places:

- **On the client's row on the Clients page** — press **Loyalty progress** to see how close they are to every rule, and issue anything they have already earned even if they are not buying today.
- **In the Sales dialog, the moment you pick that client** — this is where it matters most, because it is where the free item or discount actually gets used.

7.3 Applying a reward at the till

Pick the client in **Sales**. If they have earned anything, a **Rewards** panel appears listing it, with an **Apply** button.

- **Free service / free product** — Apply either zeroes the matching line already in the cart, or adds a new free line if it is not there yet. That line locks — you cannot retype its price or item by accident, because the reward already fixed what it is.
- **Discount** — Apply subtracts the reward amount from the sale total. You will see the subtotal and the reward deduction shown separately, above the final total.
- **Custom** — Apply drops the reward's description into the sale note, since a free-text reward cannot be priced automatically. Give it to the client yourself and record what you gave in the note.

Applying is not final until you press **Record sale** — press **Undo** on the reward beforehand if you picked the wrong one. Once the sale is recorded, the reward is marked used and will not appear again for that client until they earn it a second time.

TIP

A reward earned on an earlier visit and never used still shows up here on the client's next visit, labelled "*already earned*" — nothing is lost if they do not redeem it the same day they qualify.

7.4 Who can apply and issue rewards

Cashiers can apply rewards at the till and issue them from the Clients page, the same as an admin. The system only ever lets a reward be given to someone who has genuinely earned it — that check happens every time, regardless of who presses the button, so there is no need to route it through an admin first.

TIP

Check **Loyalty progress** on the client's row while they are still in the shop. That is the moment to tell them they are two visits from a free treatment.

8. Reports

Reports is available to admins and super admins. Each tab answers one question.

Tab	Answers
Takings	What did we make, by day and by week?
By client	Who spends the most with us?
By stylist	How much revenue did each staff member bring in?
Items	What sells most?
Visits	How often do clients come back?
Low stock	What do I need to reorder? (5 units or fewer)
Rewards	Which rewards have been redeemed, and how many are still outstanding?

Stylist figures only count sales where somebody filled in the stylist field, so make that a habit at the till if you want that tab to be meaningful.

9. Employee attendance

Your employees are on the **Staff** page and scan the fingerprint device exactly as in any other institution.

1. Add the employee under **Staff**.
2. Go to **Enrollment**, create a job for that person, pick the device, and queue it.
3. The employee places their finger twice at the device when prompted.
4. From then on they scan at the start of each day (or in and out, depending on your scan mode).

Closed Days is where you record the days the shop is shut. Staff are not marked absent on those days. Add your weekly closing day and public holidays here; tick *Recurring* for holidays that fall on the same date every year.

9.1 Staff who are also cashiers

If somebody both clocks in with a fingerprint *and* logs in to record sales, you can link their login to their staff record when creating the account. This keeps one person from appearing as two unrelated entries.

10. Who can do what

	Super admin	Admin	Cashier
Record a sale	Yes	Yes	Yes
Add and edit clients	Yes	Yes	Yes
View and edit catalog	Yes	Yes	Yes
Apply / issue a reward the client has earned	Yes	Yes	Yes
Build or edit loyalty rules	Yes	Yes	No
Reports	Yes	Yes	No
Staff roster and attendance	Yes	Yes	No
Devices and enrollment	Yes	No	No
Accounts	Yes	View only	No
Settings	Yes	No	No

Cashier is the till role: clients, sales, and catalog, and nothing else. Give your counter staff this role. It keeps takings reports, staff attendance, and settings out of reach without getting in the way of serving customers. They can still give out a reward a client has genuinely earned — the system checks eligibility itself, so this never depends on the cashier's judgement.

11. Device quick reference

The screen on the device tells you what it is doing. This is the fastest way to check without opening the dashboard.

Screen shows	Meaning
Clock and device name	Normal, waiting for a scan
A name, then Present / Time In / Time Out	Scan recognised and recorded
A name and "Offline"	Recognised, but no internet — it is saved and will upload itself
"COOLDOWN" and a name	Same person scanned again within a minute. Normal.
"NO MATCH"	Finger not recognised. Try again.
A "queued" count under the clock	That many scans are waiting for the internet to return
"PENDING" and a MAC address	Device not yet assigned — see the Super Administrator Manual
"OTA UPDATE" / "Do not unplug"	Installing an update. Leave it powered on.

Light	Meaning
Solid blue	Ready, online
Solid purple	Ready, but no WiFi
Green flash	Scan accepted
Red flash	Not recognised

Light	Meaning
Breathing yellow	Waiting to be assigned
Breathing red	Installing an update — do not unplug

12. Everyday problems

Problem	What to do
Can't add a client — phone rejected	That number already belongs to another client, including an archived one. Search for it.
Can't add a product — name rejected	An active item already uses that name. Rename, or find and reuse the existing one.
A sale went in wrong	Record the correction and note it. Ask your super admin if a record needs removing.
Stock count is wrong	Edit the product and type the true figure.
Staff member marked absent on a closed day	Add that date under Closed Days .
"By stylist" report looks empty	The stylist field was left blank on those sales.
Device screen shows a queue count	It has lost WiFi. Scans are safe and upload automatically. Check the router.
